The Notes widget is an important part of a planner app because it makes it easy for users to make and organise notes. It makes it easy to write down important details, reminders, or thoughts right in the app. This widget helps users be more productive and organised by putting all of their notes in one place.

Using the notes widget is simple. To save a note, users just need to click on the text box, type it in, and press the "Add" button. The app shows a list of all the notes, so users can look at them and change them whenever they want. To edit a note, simply click on it and make changes in the input box. To delete a note, users can simply click the "Delete" button next to it.

This widget makes planning easier by helping users stay organised, put jobs in order of importance, and get a full view of their notes in the planner app.
I hope you find this useful.
